

CHEVIOT PRODUCTS

Model # 35576

(This supply tube kit includes only the parts shown. The faucet should be purchased separately)

INSTRUCTIONS

Note: Use teflon seal tape on all male threaded connections.

*When using a wrench to tighten connections use a cloth to wrap around each part to prevent damage to the product.

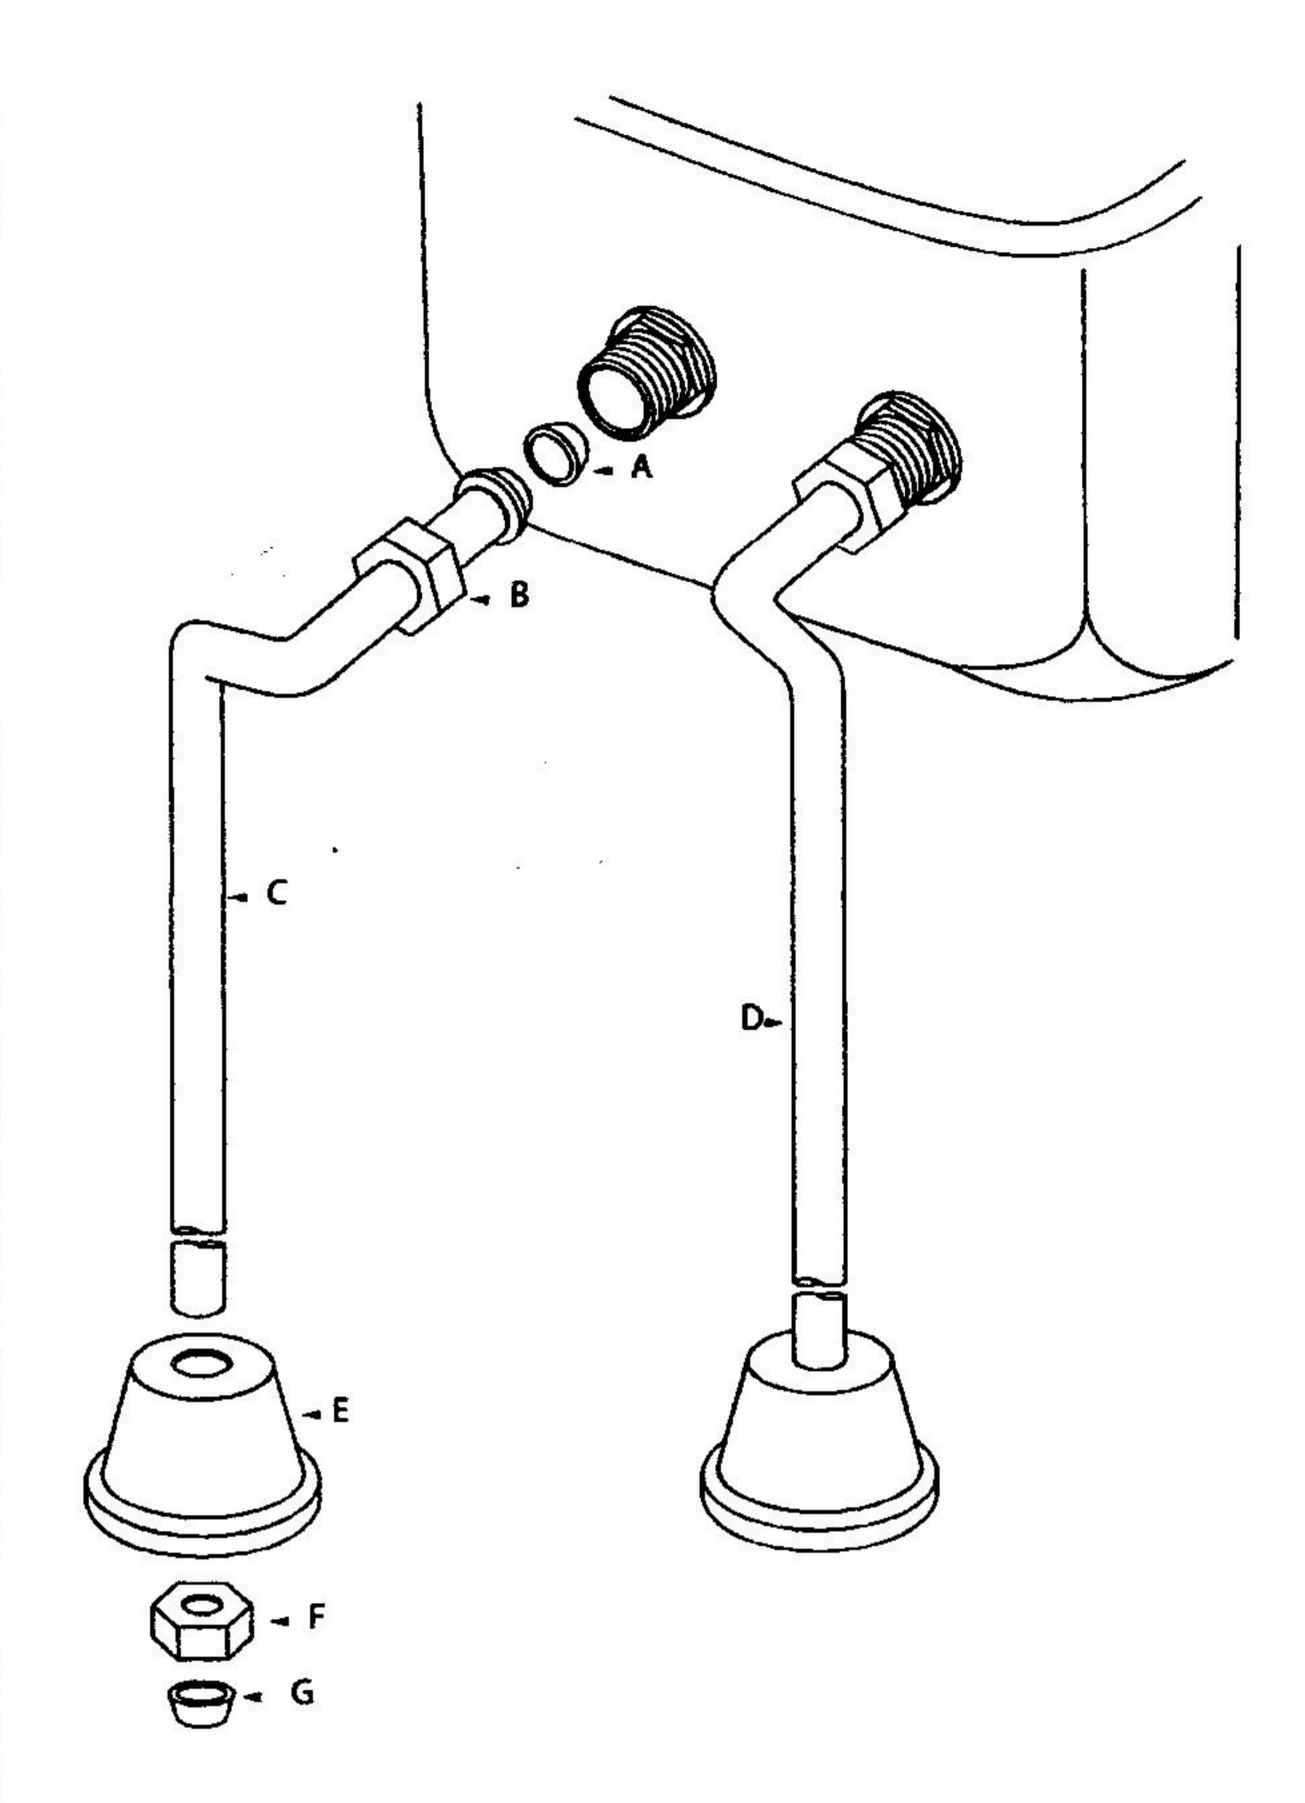

- 1. First shut off water supply to bathtub / shower area. Remove old water tubing. Take the left supply tube (C) and put a cone washer (A) with the wide end of the washer inward, onto the upper end of the supply (C) as in diagram.
- 2. Slide the decorative lock nut (B) up to the top of the left supply tube (C) and over the cone washer (A).
- 3. On the bottom of the left supply tube (C), slide one of the escutcheons (E) up the tube part way, then directly under the escutcheon, slide a lock nut (F) up the end of the tube (C).
- 4. Take another cone washer (G) and with the wide end of the washer upward install it onto the bottom end of the tube (C).
- 5. Repeat all steps for the right side supply tube.

To install Tubes:

- 1. Take the left supply tube (C) and attach the bottom end of it to the water supply tubing in the floor by screwing the locknut (F) down tightly. Let the escutcheon (E) slide down to the floor.
- 2. Take the upper end of the left supply tube (C) and attach it to the cold side supply for the faucet on the back of the tub. Tightly screw the decorative lock nut (B) over for a tight fit.
- 3. Repeat these steps for the right side supply tube (D).

CARE AND MAINTENANCE

Minimum Maintenance is required to maintain product finish. With proper maintenance your CHEVIOT Faucet will continually look like new. Special care should be taken when cleaning your faucet and the following suggestions should help extend your faucet life.

- a) Cleaning should be done regularly using a soft cotton cloth and warm water, then towel dry.
- b) Do not use cleaners that contain abrasives or harsh chemicals; Care should be taken in selecting cleaning supplies. Many cleaners contain detergents, ammonia, or other corrosive solvents that could damage your faucet finish.

c) occasionally clean with a non-abrasive wax polish.
